### Product Overview

- The S407/S406 power supply/battery charger has been developed using switched mode technology to produce an efficient and lightweight power unit for a host of fire alarm applications.
- Suited to almost any application, the S407/S406 is designed to be a universal power source which will reduce spares stock holding and increase serviceability of systems.
- The comprehensive monitoring features of the S407/S406 include true battery present detection, low battery voltage warning, battery overcharge warning and low battery shut off.
- These features combined with the temperature compensated charger output will increase the service life of sealed lead acid batteries.
- The S407 and S406 power supplies are available as chassis only versions for mounting into existing enclosures of various sizes to suit different battery capacities.

S407 - 2.5 Amp PSU

S406 - 5.25 Amp PSU

## Formula

### Battery Calculation BS 5839-1:2002

$$C_{min} = 1.25 (T_1 I_1 + D I_2 / 2)$$

#### Where:

- C min** = Minimum capacity of the battery when new at the 20 hour discharge rate and at 20 °C in ampere-hours;
- T<sub>1</sub>** = Total battery stand by period in hours;
- I<sub>1</sub>** = Total battery stand by load in amperes;
- I<sub>2</sub>** = Total battery alarm load in amperes;
- D** = a de-rating factor. (1.75)
